Avdel® Versa-Nut® Insert Fasteners

Avdel® Versa-Nut®, a blind insert fastener that doubles the grip range on soft materials, thin-walled plastics and composites, provides new levels of joint clamp and pullout resistance with fewer fasteners. With a grip range of 12.7 mm, larger than any comparable blind fastener on the market, it installs in three seconds. Four longitudinal slots evenly spaced along the length of its steel casing split open during assembly to form folded legs that spread across the underside of the workpiece. This wide bearing area distributes the load to ensure strong, vibration-resistant joints that accommodate wide variations in the thicknesses of soft materials. Versa-Nut insert fasteners can be set immediately after a component is molded, or in the finished article during assembly. They are usable as a nut plate, nut plate and pivot bearing, nut plate and space, nut and bushing, or nut and rivet. For more information, go to www.avdel-global.com, or e-mail infoavdelusa@acument.com.
